OVXS STUDIO

MARKETING PLAYBOOK · V1.0

One topic in. Posts out.

How the OVXS team plans, researches, writes, approves and posts content with Claude — and how we keep it sounding like us.

October 2026 For the OVXS team Internal — do not share outside the studio

01 · OVERVIEW

How the system works.

Claude does the slow parts — research, first drafts, designed previews, exporting images. We do the parts that need judgment: which angle is right, whether a draft sounds like us, and when it goes out. Nothing is posted without a person clicking Post.

CLAUDE · MON	CLAUDE	YOU · DESK	CLAUDE · DAILY	YOU · DESK	YOU
RESEARCH	**3 ANGLES**	**DECIDE**	**DRAFT**	**APPROVE**	**POST**
Picks 3 topics, reads our evidence, forums and sources	Three different takes, each with a hook, proof and risk	Pick A, B or C, mix them, add notes — or drop it	Long piece first, posts cut from it, designed preview	Approve with a date, or ask for changes	Files ready on the day; you post and tap "I've posted it"

Shaded steps are human decisions. Two of them — the angle and the approval — are required for every piece.

02 · ROLES

Who does what.

ROLE	DOES	NEVER DOES
Ramit (owner)	Final say on angles and approvals, edits voice.md and pillars.md, switches posting mode, posts from the company pages	—
Team	Suggests topics on the Desk, leaves notes on drafts, shares client stories and wins, posts on their own profiles once approved	Approves its own suggestions; posts anything not approved on the Desk
Claude	Researches, writes three angles, drafts, builds previews, exports images and text, keeps the tracker up to date	Posts, schedules inside LinkedIn/Facebook/Instagram, signs in, invents stats, clients or results

03 · FILES

Where everything lives.

Everything is in the private GitHub repo `iamramit/ovxs-marketing`. Nothing in it is published on the OVXS website.

WHAT	WHERE	USE IT TO
Content Desk	claude.ai artifact (link from Ramit)	Decide, review, approve, suggest topics. The only screen most people need.
voice.md	repo root	The rules every draft follows: tone, words, offer, proof, channel formats
pillars.md	repo root	The five themes we post about and the weekly mix
tracker.csv	repo root	One row per piece: status, angle, links. Our content calendar and history.
Topic folders	`topics/YYYY-MM-DD-slug/`	`brief.md` (research, angles, decisions), `copy.md`, `page.html` preview, `assets/` photos + credits, `export/` PNGs and post text
The /content skill	`.claude/skills/content/`	The instructions Claude follows. Change it to change the process.
Brand files	`brand/`	Fonts and logos for previews and exports
Photo keys	`.env` (never committed)	Unsplash access key (never share it)

04 · RHYTHM

The weekly rhythm.

WHEN (IST)	WHAT RUNS	WHAT YOU DO
Monday 10:00	Weekly run: picks up to 3 topics (Desk suggestions first, then Ovi questions and quiet pillars), researches each, writes 3 angles	Pick angles on the Desk by Tuesday
Every day 18:30	Daily run: drafts decided pieces, redrafts ones sent back, prepares anything scheduled for today (US Eastern)	Review drafts; on posting day, post and tap "I've posted it"
Any time	Live: type `/content <topic>` in Claude Code in the repo, or press "Run now" on a scheduled task	Use it when something is urgent

Good to know. Scheduled runs only fire while the Claude desktop app is open on Ramit's Mac. A missed run starts the next time the app opens. All post times are US Eastern — that's the time zone our audience and site use.

05 · STEP BY STEP

From topic to post.

1. **Suggest a topic.** Desk → **NEW TOPIC**. Write the topic in plain words, add your own take, client stories or links in Notes, pick a pillar and audience if you know them, tick what to make. Tick *Test run* to try the flow without it ever being posted.

2. **Wait for research.** The next weekly run (or "Run now") researches it: our own proof, real customer questions from Ovi, forum language, what's already been written, and 2–5 sourced stats. Every stat carries a link and year.

3. **Pick an angle.** Desk → **NEEDS YOU**. Read "What the research says", open the sources if anything looks surprising, then pick A, B or C. Use the notes box to mix ("B, but open with the Halm story") or cut ("no pricing"). Press **USE ANGLE**. Nothing is written until you do this.

4. **Review the drafts.** After the next daily run the piece is back under Needs you as *Review drafts*. Open the designed preview, read every channel. Then either:
   - **Ask for changes** — write exactly what to change. The next run redrafts only that.
   - **Go back to the angles** — if the angle itself was wrong. Drafts are kept until you pick.
   - **Approve and schedule** — pick a date and time (US Eastern) and the channels.

5. **Posting day.** The daily run prepares it. In *Draft only* mode you get a notification and the PNGs and post text are in the topic's `export/` folder. In *Stage in Chrome* mode the composers are already open and filled in.

6. **Post it yourself.** Paste, upload images in order, put the link in the first comment for LinkedIn, click Post. Then tap **I'VE POSTED IT** on the Desk. The next run records the post's link in the tracker.

Rule of thumb. A decision on the Desk takes two minutes. If a piece needs more than one round of changes, the angle was probably wrong — go back to the angles instead of patching the copy.

06 · CONTENT DESK

The Content Desk.

A private page on claude.ai that works on phone and desktop. Ramit shares it from its Share menu; people need edit access to make decisions.

PART	WHAT IT DOES
On posting day	**Draft only** (default): images and text are exported and you're notified. **Stage in Chrome**: Claude also opens LinkedIn, Facebook and Instagram with everything filled in and stops before Post.
Needs you	Cards waiting on a person: *Pick an angle* and *Review drafts*
In progress	What Claude is working on and what's scheduled, with the next step spelled out
Posted	Everything that went out, with links
New topic	Suggest a topic; your suggestions and their status are listed below the form

Buttons and what they do

BUTTON	RESULT
Use angle	Saves your pick and notes. Drafts come on the next daily run. Same angle, no notes → existing drafts go straight back to review.
Drop topic	Asks once, then removes it from the flow for good
Ask for changes	Needs a note. Redraft on the next run.
Approve and schedule	Needs a date, time and at least one channel
Go back to the angles	Reopens the choice; drafts are kept
Research more angles	Shown when a piece has only one angle. Keeps yours as A and adds B and C.
Swap photos	New Unsplash photos on the next run; the copy stays. Notes are used as direction.
No photo / Use photos again	Brand-colour panels instead of photos for that piece, or back again.
I've posted it / Test done	Closes the piece

07 · VOICE

Using voice.md.

voice.md is the most important file in the system. Every draft is checked against it before anyone sees it, and it overrides everything else — including the skill's own instructions.

What's in it

- **Who we are and who we write for** — the three audiences and the default reader.
- **How we sound** — honest, plain, we → you, sentence case, no hype, no exclamation marks, no emoji, spaced em dashes.
- **Words** — what we say, and the banned list (solutions, leverage, unlock, seamless...).
- **The offer and proof** — exact prices and exact client results. Never rounded, never invented.
- **Hard rules** — US Eastern only, every stat sourced, no mention of AI writing it.
- **Channel rules** — length, hook, hashtags and image size for each platform.
- **Learned rules** — corrections that now apply to everything.

How to change it

1. When you correct a draft, Claude asks whether the correction applies beyond that piece. Say yes and it's added under Learned rules.
2. To edit directly: open voice.md in the repo, change it, commit with a short reason ("ban 'game-changer'", "prices updated Nov 2026").
3. When a price or case-study result changes on the website, update the offer and proof sections the same day.

SOUNDS LIKE US

"If an app or a quick fix will do the job, we'll tell you."

"Count the clicks from cart to paid. Then cut."

DOESN'T

"Unlock your store's full potential with our seamless solutions!"

"In today's fast-paced ecommerce world..."

08 · PILLARS

Using pillars.md.

Every piece belongs to one of five pillars. They keep the feed balanced and stop us posting the same kind of thing four times in a row.

PILLAR	WHAT IT IS	BEST FORMATS
Honest advice	The straight answer agencies don't give	LinkedIn post, carousel, article
Proof	Real client work, results quoted exactly	Carousel, case-study article
Shopify know-how	Specific how-tos that show depth	Article (SEO), checklist carousel, newsletter
Behind the studio	How we work: the audit, fixed prices, senior people	LinkedIn video, post, Facebook
Founder POV	Ramit's opinions and lessons, first person	Personal LinkedIn post, video

Weekly mix: two Honest advice, one Proof, one Shopify know-how; Behind the studio or Founder POV every other week. The weekly run checks the tracker and favours pillars that have been quiet.

Changing pillars: review them once a quarter with the numbers (section 12). Rename, merge or retire a pillar in pillars.md; the next run uses the new list. Four of the five are still marked *draft* — confirm or change them first.

09 · TRACKER

Using tracker.csv.

One row per piece, kept in step with the Desk by every run. Open it in Numbers, Excel or Google Sheets (import, don't edit the live file there).

COLUMN	MEANING
date, slug, title	When the brief started, its folder name, its title
pillar, audience	From pillars.md
channels	What was made, separated by |
angle	The angle that was chosen
status	researching → awaiting-decision → decided → drafting → review ⇄ changes → approved → posted · or dropped · or test
artifact_url	The designed preview
posted_url	The live post(s)
notes	Anything worth remembering

Claude reads it before choosing topics so we don't repeat a topic or angle within six weeks. Test rows are ignored for that check.

10 · PHOTOS

Photos from Unsplash.

Posts use free stock from **Unsplash**. Its licence allows commercial use with no fee. (Pexels has paused new API keys; the script will use it too if we get one.) Claude searches with our API key, picks photos that fit our look, downloads them into the topic's `assets/` folder and records who took each one in `assets/credits.json`.

What makes a good OVXS photo

- Calm, daylight, real work: hands on a laptop, packing parcels, a studio desk.
- Muted naturals and greens that sit well with our teal.
- Space top-left for a headline.
- No glossy corporate stock, no forced smiles at a screen.

Rules

- **Never Pinterest, Google Images or Instagram.** Those photos belong to someone and aren't licensed for us.
- **Stock people are never presented as clients or team.**
- Credit isn't required by either licence, but we keep it in credits.json, and Unsplash asks that we credit when it's practical (e.g. in the article footer).
- To suggest a photo yourself, paste an Unsplash photo page link in the topic notes.

Setup (once)

1. Done for OVXS: an Unsplash app at **unsplash.com/developers**. Only the *Access key* is used; the secret key isn't needed.
2. The key lives in `.env` in the repo (copy `.env.example` to create it). Never commit .env or paste keys into a chat.
3. Test: `node scripts/stock.mjs search "packing parcels"`

11 · RULES

House rules.

1. Two human decisions per piece, every time: the angle and the approval.
2. A person always clicks Post. Claude never posts, schedules inside a platform or signs in.
3. No stat without a source link and year. Sources older than three years need Ramit's OK.
4. Prices and client results are copied exactly from voice.md.
5. US Eastern is the only time zone or location we mention.
6. We don't say AI wrote it, and we don't reference other studios' sites.
7. Nothing from this repo goes on the website.

12 · IMPROVING

Getting better every month.

The system learns from three places: your corrections, the numbers, and real customer questions. Thirty minutes a month keeps it sharp.

Every piece

- Correct the draft with specific notes, not "make it better". Say yes when Claude asks whether a correction is a general rule.
- If you rewrite a hook yourself, paste your version into the notes — it teaches the next one.

First Monday of the month (30 minutes)

1. **Numbers.** Pull impressions, engagement, clicks and audit bookings for last month's posts from LinkedIn, Meta and Shopify. Note the top three and the bottom three.
2. **Patterns.** Which pillar, angle type (checklist, contrarian, story) and hook style won? Write one line per finding under "Learned rules" in voice.md.
3. **Questions.** Skim last month's Ovi chats for questions we haven't answered in content. Add the best two as Desk topics.
4. **Pillars.** If a pillar has been bottom three for two months, rework or retire it.
5. **Process.** Anything that annoyed you? Ask Claude to change the /content skill and commit it.

Every quarter

- Re-read voice.md end to end and cut anything nobody follows.
- Check prices and case-study results against the website.
- Review this playbook and bump its version.

13 · ROADMAP

Future versions.

Ideas in rough priority order. Each one is a self-contained change to the skill or the Desk.

IDEA	EFFORT	WHY
Performance columns in the tracker	Small	Impressions, clicks and audit bookings per post, so the monthly review is one glance
Photo picks on the Desk	Small	Choose between 3 suggested photos per post instead of Claude choosing
Monthly report artifact	Small	Auto-generated on the 1st: what posted, what worked, which pillars are quiet
Team roles on the Desk	Medium	Team members suggest and comment; only Ramit approves
Weekly newsletter assembly	Medium	Bundle the week's best piece into one newsletter draft for Klaviyo or Mailchimp
Blog publishing to Shopify as a draft	Medium	Articles land as unpublished Shopify blog drafts for a final read in the admin
Scheduler hand-off	Medium	Approved posts go to Buffer or Metricool via Zapier — still approved by a person first
Short video kit	Medium	Script, shot list and captions file for Reels and LinkedIn video from any article
Repurpose old wins	Small	Every quarter, re-cut the top three posts into a new format
Client-ready version	Large	Package the system as a service for our own Shopify clients

14 · TROUBLESHOOTING

When something goes wrong.

PROBLEM	FIX
Nothing new on the Desk	Was the Claude app open at run time? Check Scheduled → the task's Runs. Press "Run now".
Desk buttons are greyed out	You have view access only. Ask Ramit for edit access.
A piece has only one angle	Press "Research more angles" on its card.
The draft doesn't sound like us	Ask for changes with specifics, then add the rule to voice.md.
Chrome didn't open on posting day	Mode is Draft only, or Chrome wasn't connected. Files are in the topic's export/ folder.
Photo search fails	The .env key is missing or wrong, or we hit Unsplash's hourly limit (about 50 requests). Run the test command in section 10, or wait an hour.
A wrong stat went out	Edit or delete the post, fix the brief's Facts table, and add a Learned rule.

QUICK REFERENCE

The 30-second version.

EVERY WEEK

- Monday: angles appear on the Desk. Pick them by Tuesday.
- Daily 18:30 IST: drafts appear. Approve or ask for changes.
- Posting day: files are ready. Post, then tap "I've posted it".

EVERY MONTH

- Top 3 and bottom 3 posts → one line each in voice.md.
- Two new topics from Ovi questions.
- Retire a pillar that's been bottom 3 twice.

Never. Post without approval on the Desk · use photos from Pinterest or Google · quote a stat without a link · round a price or a client result.
